Dengue is a mosquito borne disease transmitted by the Aedes mosquito. It is a febrile illness affecting infants, young children and adults. Dengue is a worldwide problem, affecting the tropical and sub-tropical regions, mostly the urban and semi-urban areas. One third of the world's population is at risk of transmission of disease. The incidence of dengue has grown dramatically around the world in recent decades. So, creating **awareness** is an effective way of preventing **Dengue** Fever. The **objectives** of the programme are-

- To create awareness on Dengue Fever among adults residing in an Urban Slum area in and around Serampore.
- To Identify the vector mosquito responsible for disease transmission
- Gather knowledge about the breeding habit and habitat
- To assess the level of awareness on Dengue Fever and its preventive measures among the study population
- To provide knowledge on Clinical profile axis to fight against the menace
